

This outdoor space is a place that invites tourists to enter the recreation area at the White Sand Beach of Parbaba Samosir. The situation of this space is not entirely shaped by buildings with a Toba Batak architectural style. However, the building is set in context with the beachfront area as an effort to build Parbaba's identity as a water recreation destination in the city of Pangururan.

The regulation of the open tent positions between permanent buildings blocks the view toward the beach. The situation of the many open tents available around the main building leading to the beach creates a slum situation for a waterfront recreational environment.

The architecture of the building in a transparent setting supported by vertical column elements provides an expansive view of Parbaba's White Sand Beach.

The situation of this place as a place to the White Sand Beach of Parbaba Samosir. The building, which is positioned as a vista, has a curved roof shape and combines elements of triangular domination. The column that acts as a support for the building supports its function to invite visitors to come to White Sand Beach of Parbaba.

The architecture of the hotel building at the White Sand Beach of Parbaba Samosir is dominated by a rectangular shape with vertical elements embodied by elements of columns, windows, and doors. The top of the hotel building is slopingly designed with a shield roof shape. The overall architectural style follows the typology of the archipelago in Indonesia.

The small prayer room building is arranged in a square with the walls open toward the beach. This situation triggers Visitors to enjoy the steps in the journey, determining how much pleasure they will get from the natural Creator of Lake Toba.

The existence of a rectangular gazebo on the edge of the White Sand Beach of Parbaba Samosir should be arranged in an integrated manner with water recreation attractions so as not to damage the coastal ecosystem of Lake Toba and not create the impression of slums.
