

**Come to the Sinatapan Samosir Prayer Tower,  
and enjoy the Nature of Lake Toba as one of  
God's Miracles**

In 2100, the world will have become a world full of technology, and humans will coexist with other human species. The world makes everything connected and communication easy and fast. This coexistence makes all human species friends without discrimination.

Meanwhile, in one of the parallel worlds, namely Earth.  
On Samosir Island, Pangururan City.

Wakende Country, parallel world of Mimika, Papua.

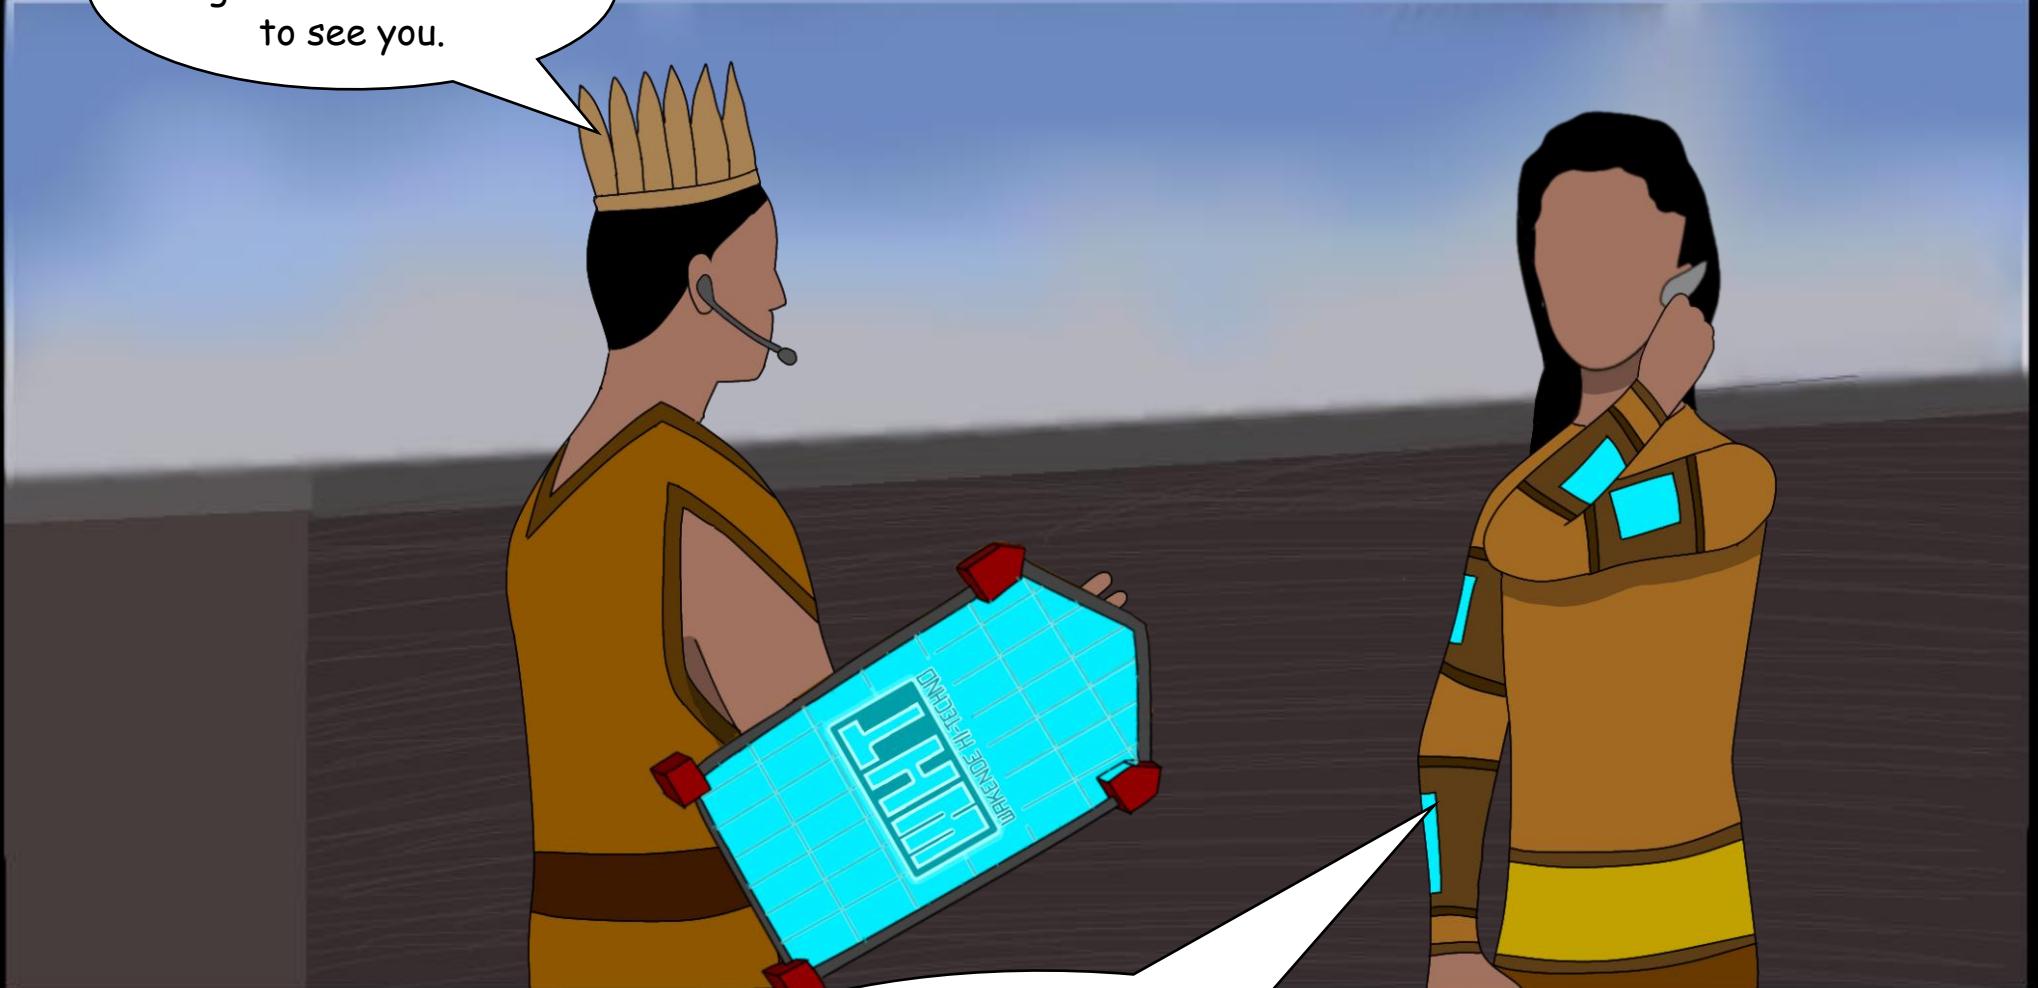

Hi Batara. I'm building a new framework for Wakende's latest technology. I'm explaining this to my colleagues. I'll call you later. You know I'm very busy, hahaha. After this, I will call you.

Look who's calling,  
head of state,  
Sandres Kogoya,  
hahaha.

Cool, new job. Please give it to me.  
Don't I always help you as much  
as I can? Stop giving up.  
I know you can get through this.  
Remember, Sandres, in difficult  
times, there is always hope. Hope is  
like an invisible star in the sunshine  
of prosperity, found only in the night  
of tribulation. In this new era, I can  
be a motivator for you. Cool, right?

Damn it, stop making fun of me.  
You know I'm under a lot of  
pressure to lead this country.  
Since my brother Frans died.  
I have to fight alone to defend  
this country. You better help me  
develop new technology, Bat.  
You, as the Sijibat clan, must be  
intelligent Batak people.

A few days later...

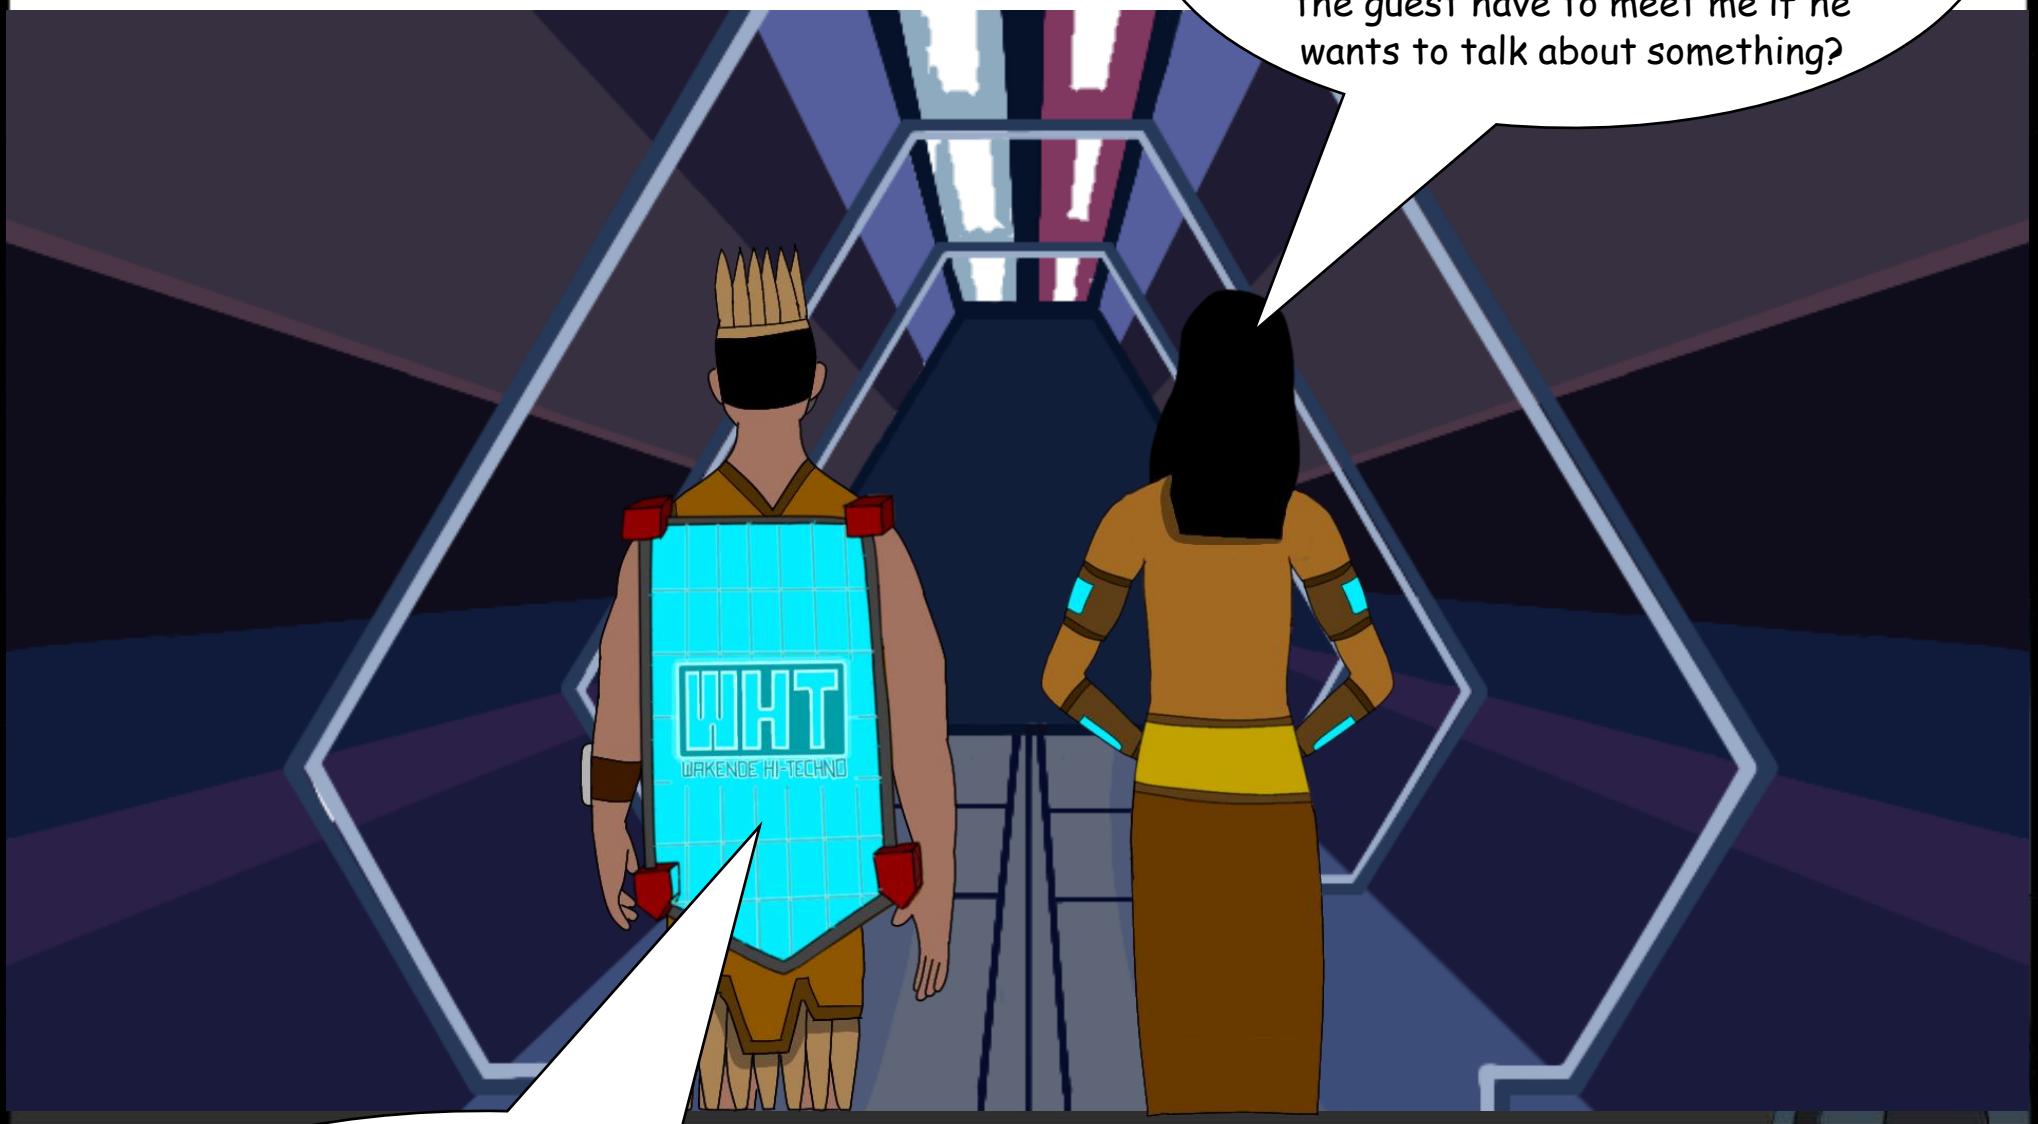

Sandres, we have a guest who wants to see you.

I don't remember that today I have an appointment.  
All right, let him in.

But who will meet me?  
Why not make an  
appointment first?  
I'm so uncomfortable  
with this.

Don't be prejudiced against  
other people, Sandres.  
So that you also avoid the  
lousy prejudice of others.

Today almost all spheres of human life are colored by technology. Technology cannot be separated from human life in Wakende Country. Why does the guest have to meet me if he wants to talk about something?

Globalization of information or communication technology results from the revolution of communication tools.

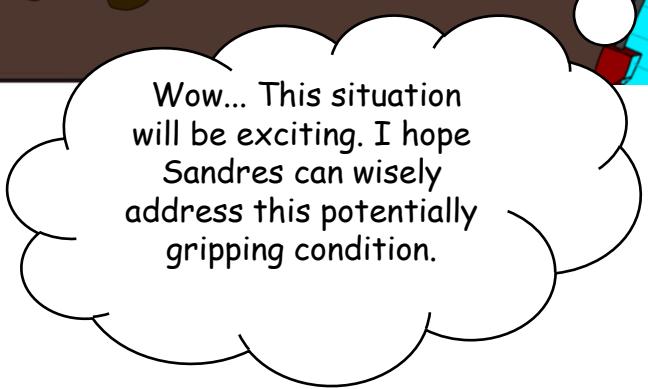

But Sandres, you should know that so many people's lives have changed because of an offline meeting.

Sanders, I am Hans, the ruler of the seas from America. I condemn your country for announcing the possession of cuprunium to the world!

Because of you, our country is visited by greedy humans who are busy looking for cuprunium. Immediately change this situation, Or I will ravage your country!

Hans, I'm so sorry. I don't mean to disturb your country. But it looks like they are looking for a cuprunium in your country because they know that excellent cuprunium comes from the bottom of the sea. So look for the best countries on the seabed that produce cuprunium that can rival Wakende's cuprunium.

Wow... This situation will be exciting. I hope Sandres can wisely address this potentially gripping condition.

After 2 weeks of struggle.

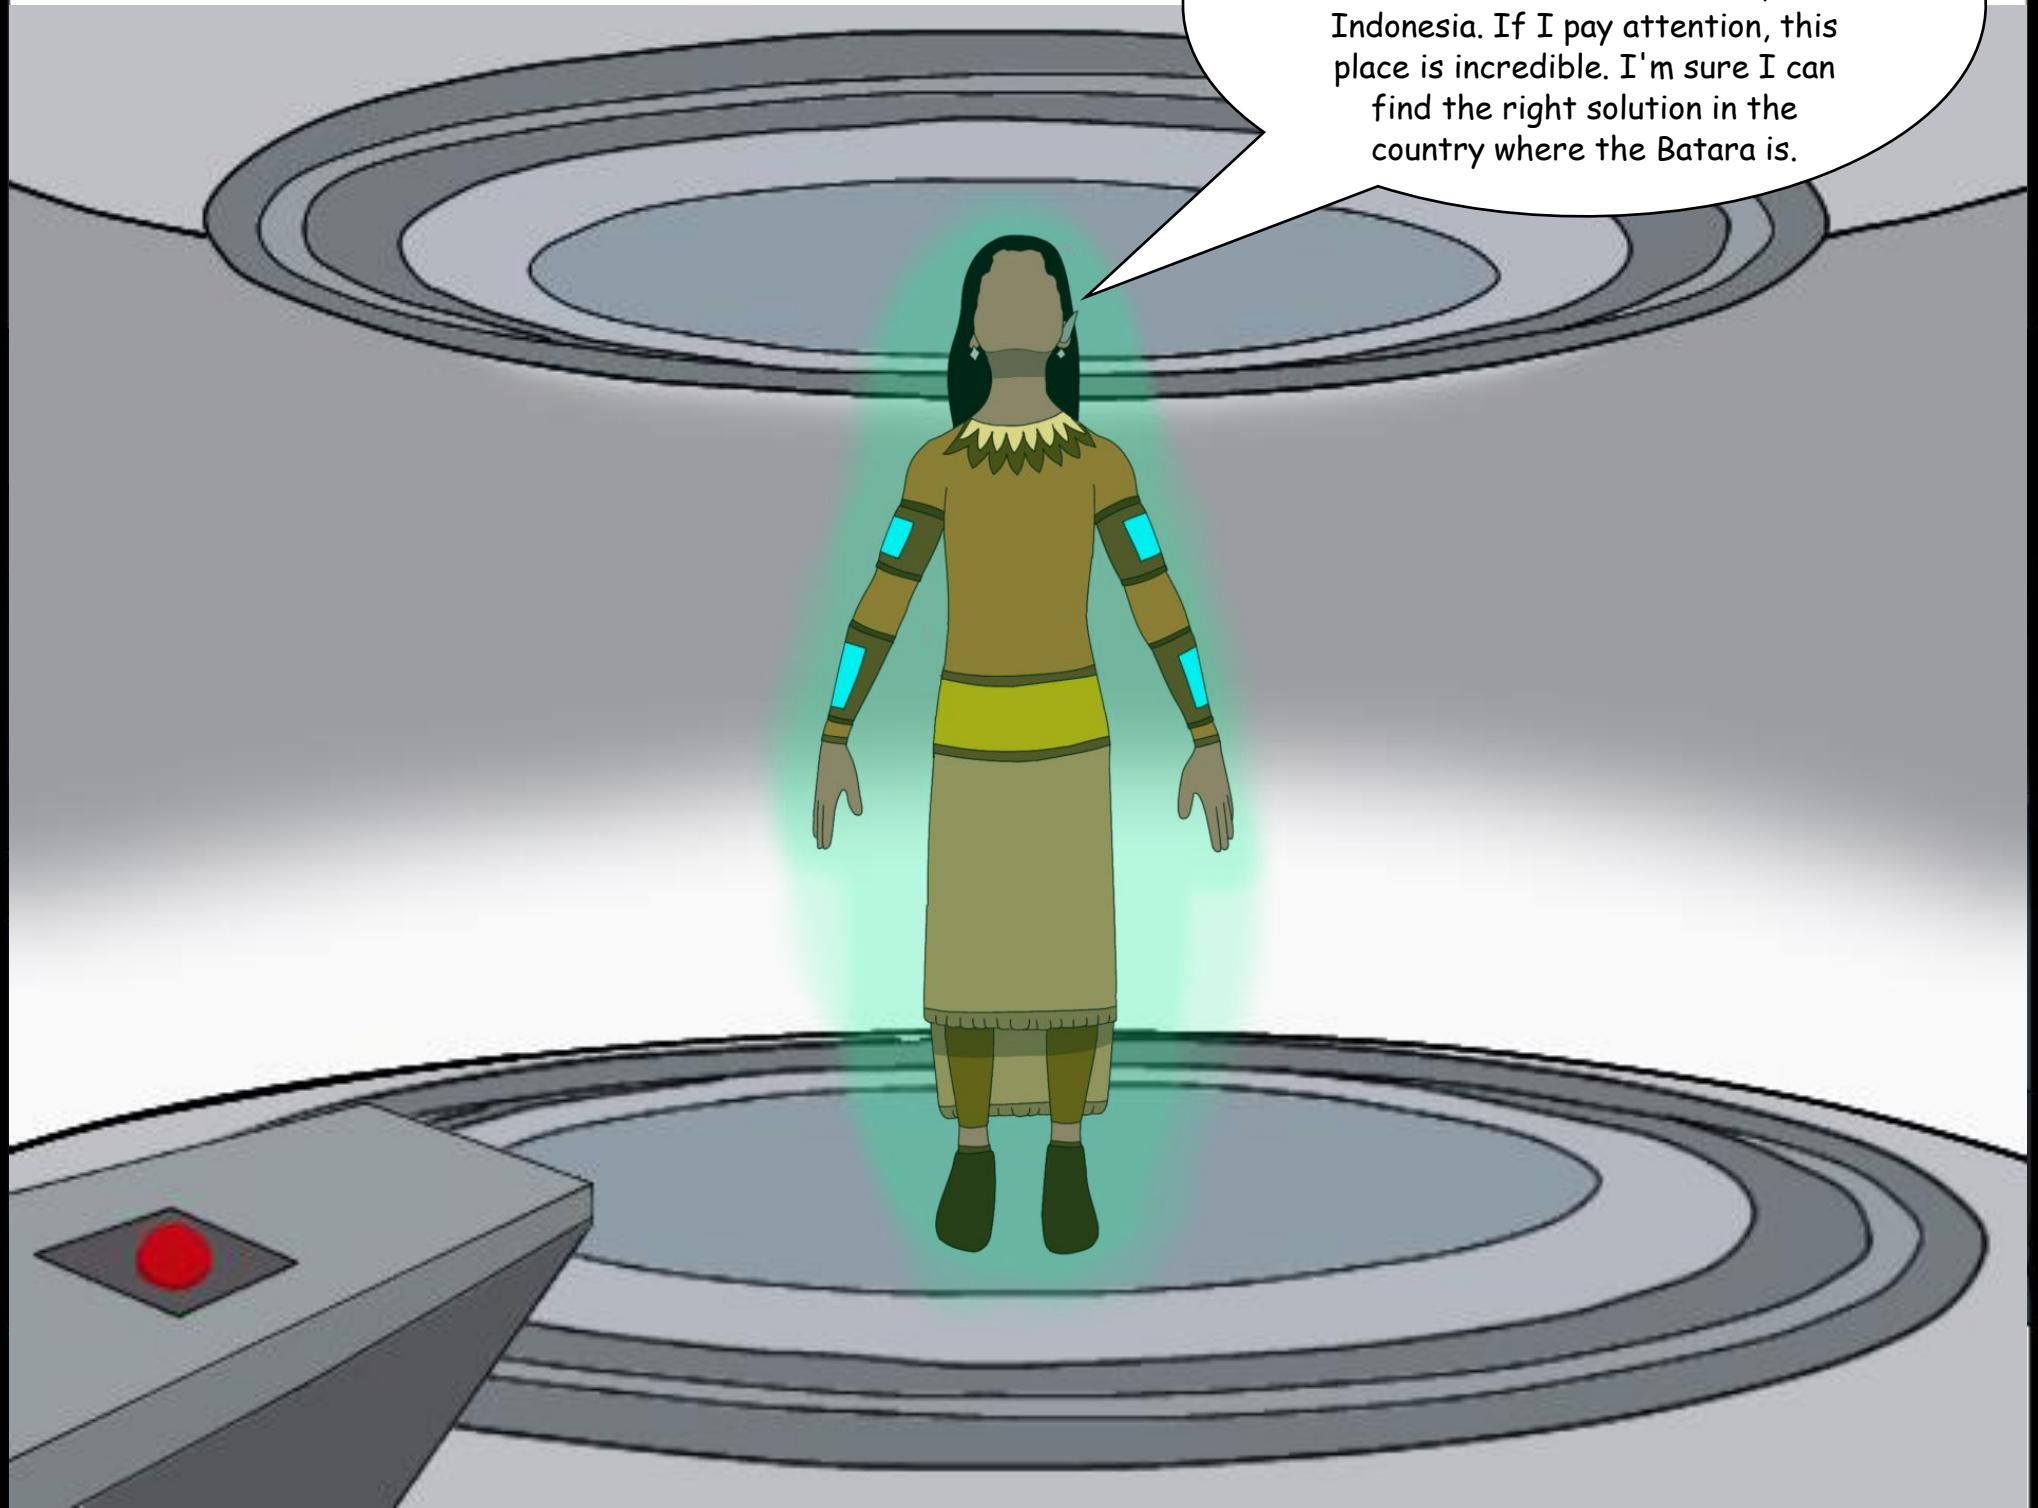

How is this?

I made a big mistake. I lost to the situation. The cuprunium of this country has been taken over by Hans. I must immediately ask Batara for help. Otherwise, Wakende will be destroyed.

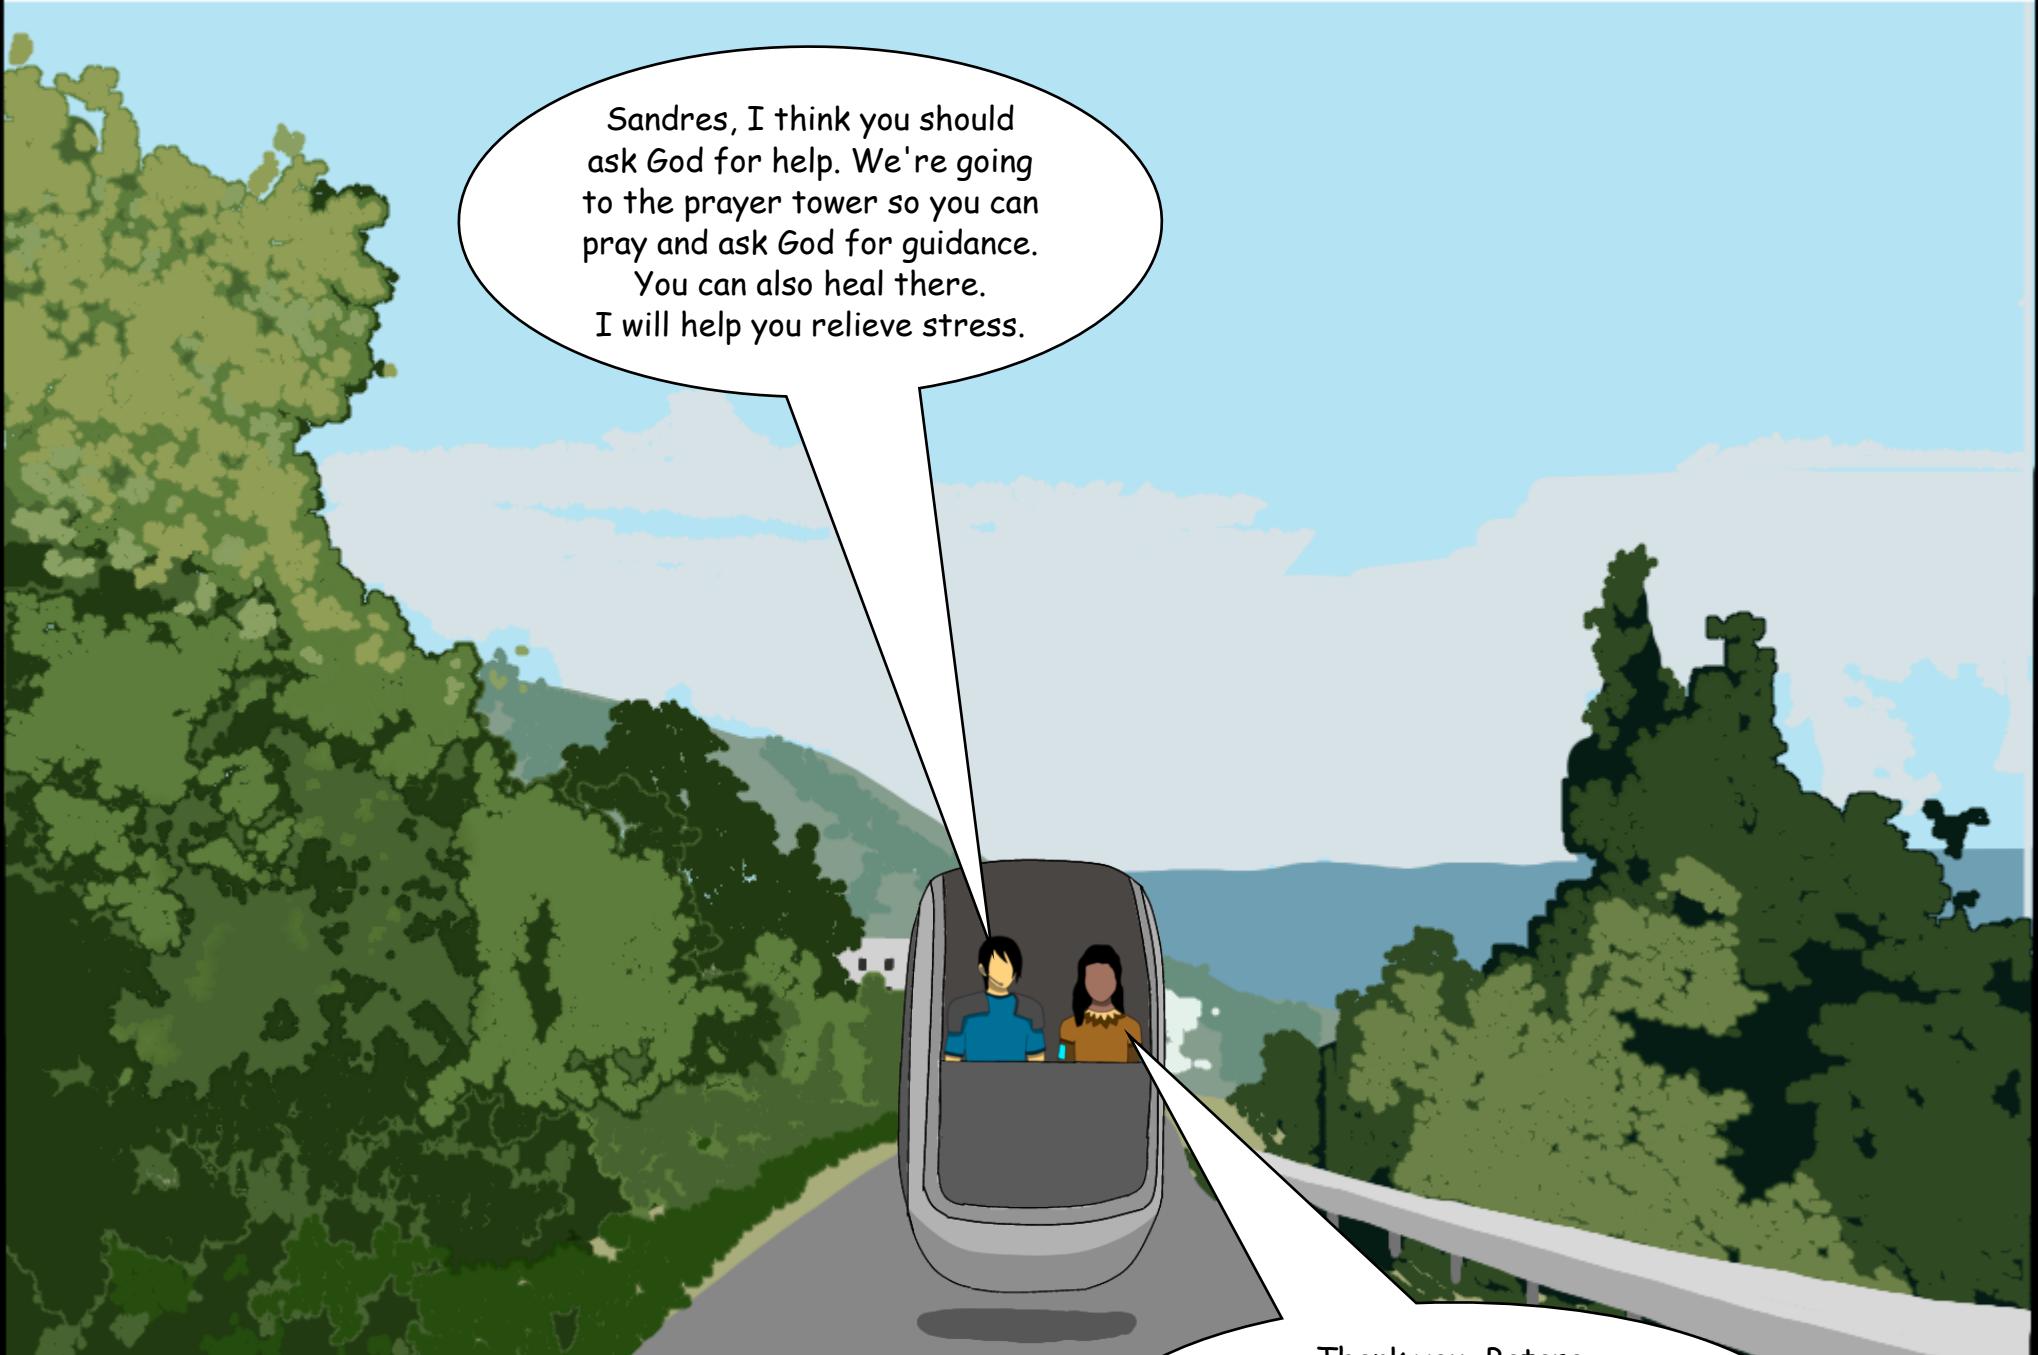

Batara, I lost cuprunium.  
I failed to protect my country.  
Batara, what should I do?  
I'm really desperate.  
I failed to be a good head.

Sandres, calm down. I will help you always. You better calm down first. Let's visit Samosir. I will take you to a beautiful place so you can relieve stress. I'll help you find cuprunium after that.

I clicked on the Pangururan destination where Batara is, a sub-district in Samosir Regency, North Sumatra Province, Indonesia. If I pay attention, this place is incredible. I'm sure I can find the right solution in the country where the Batara is.

Sandres then teleported and came to Samosir.

A landscape scene featuring a road winding through dense green forests under a blue sky with white clouds. In the center, a grey teleporter pod is shown from a low angle, emitting a bright beam of light that points towards the upper left. Two characters are visible inside the pod: a man with dark hair wearing a blue shirt, and a woman with dark hair wearing an orange patterned top. A large, white, rounded speech bubble originates from the right side of the teleporter beam, containing the following text.

Sandres, I think you should ask God for help. We're going to the prayer tower so you can pray and ask God for guidance. You can also heal there. I will help you relieve stress.

Thank you, Batara.  
You may be right.  
I rely too much on myself and  
forget God in my plans.  
Thanks for the help, Batara.

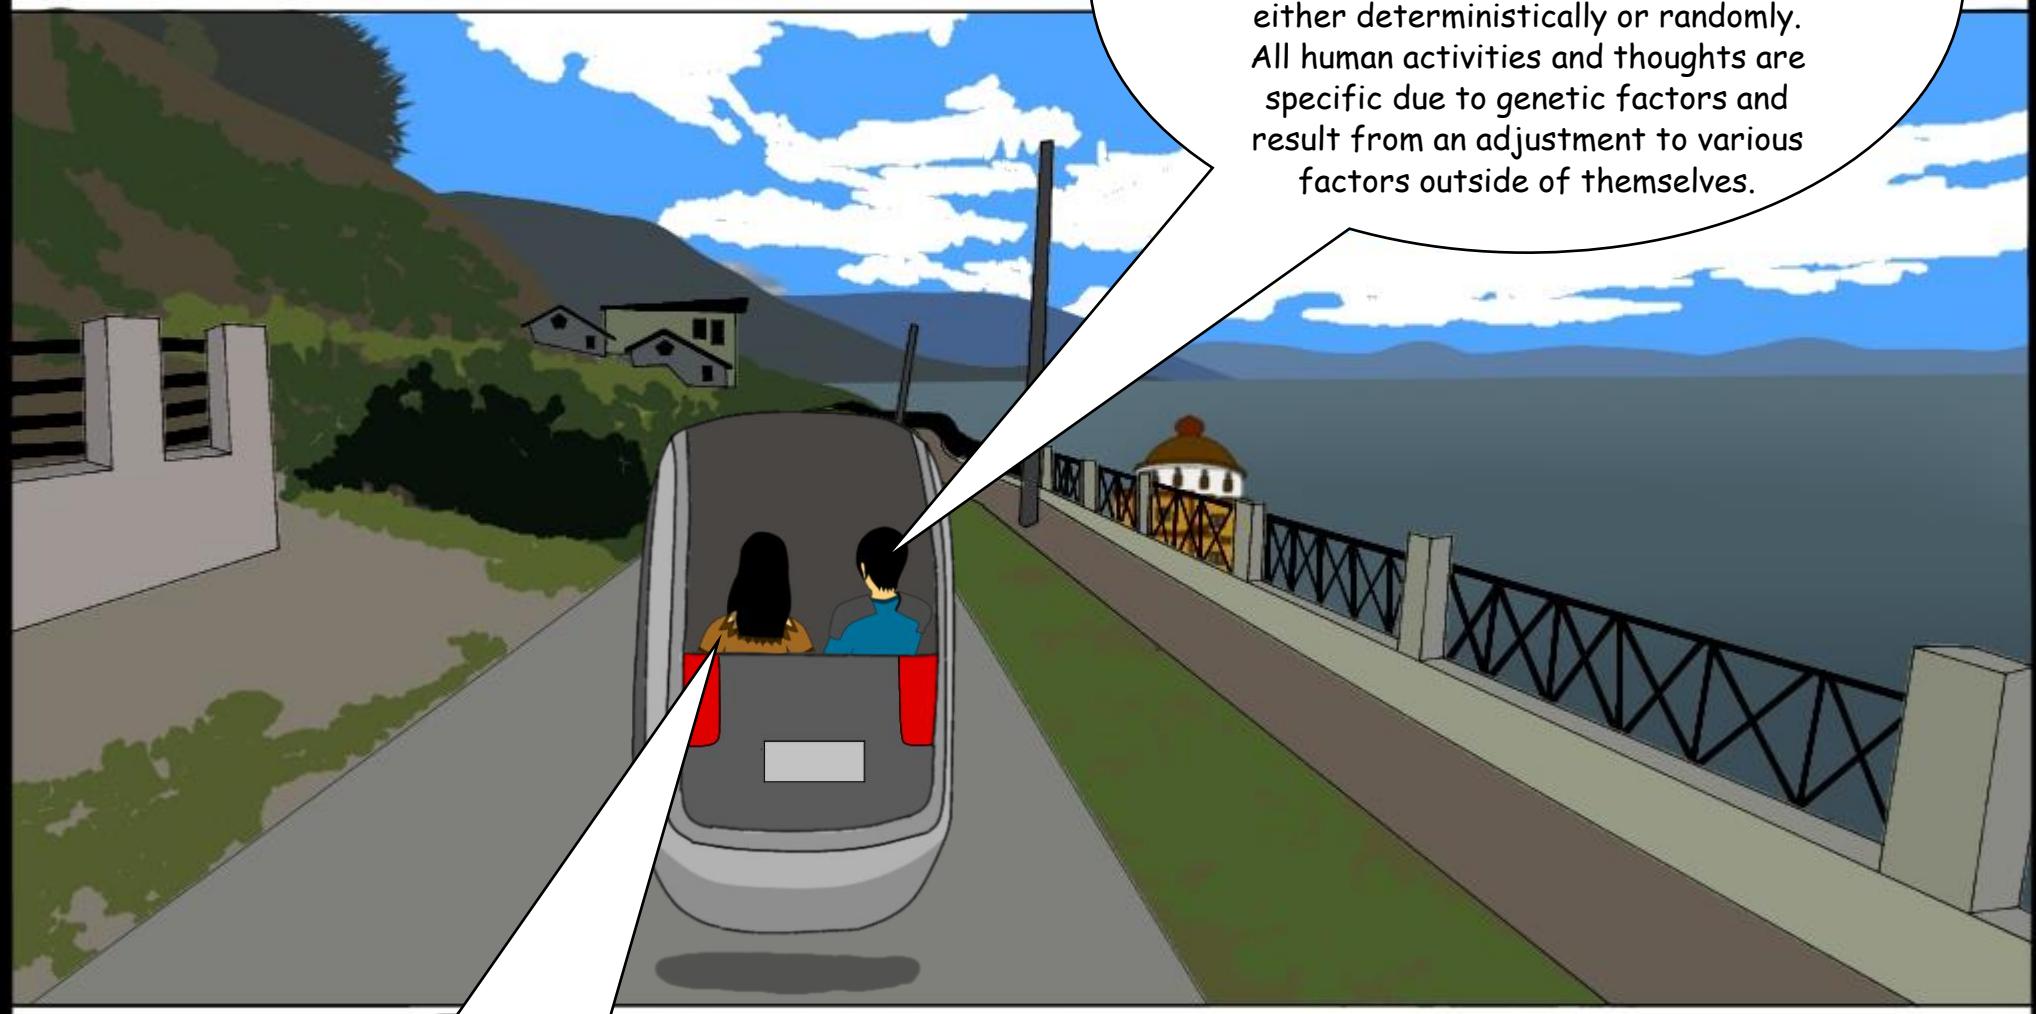

Sandres, with the advancement of technology that "unites" humans?  
In fact, fragmentations are the answer.  
Instead, what is obtained is the phenomenon of division,  
the instability of living together,  
and the journey of life and  
an uncomfortable and peaceful future.

The revolution that occurred in the industry changed my mindset,  
Batara. Technological advances also strengthen connectivity.  
So, in a short time, I have arrived in your beautiful city.

Yes... The general belief that humans as individual subjects are whole and integral, possessing essence and self-awareness, is countered by the affirmation that organisms are algorithms, and humans are not individuals, but individuals. Humans are a collection of many different algorithms and do not have a single inner voice or self.

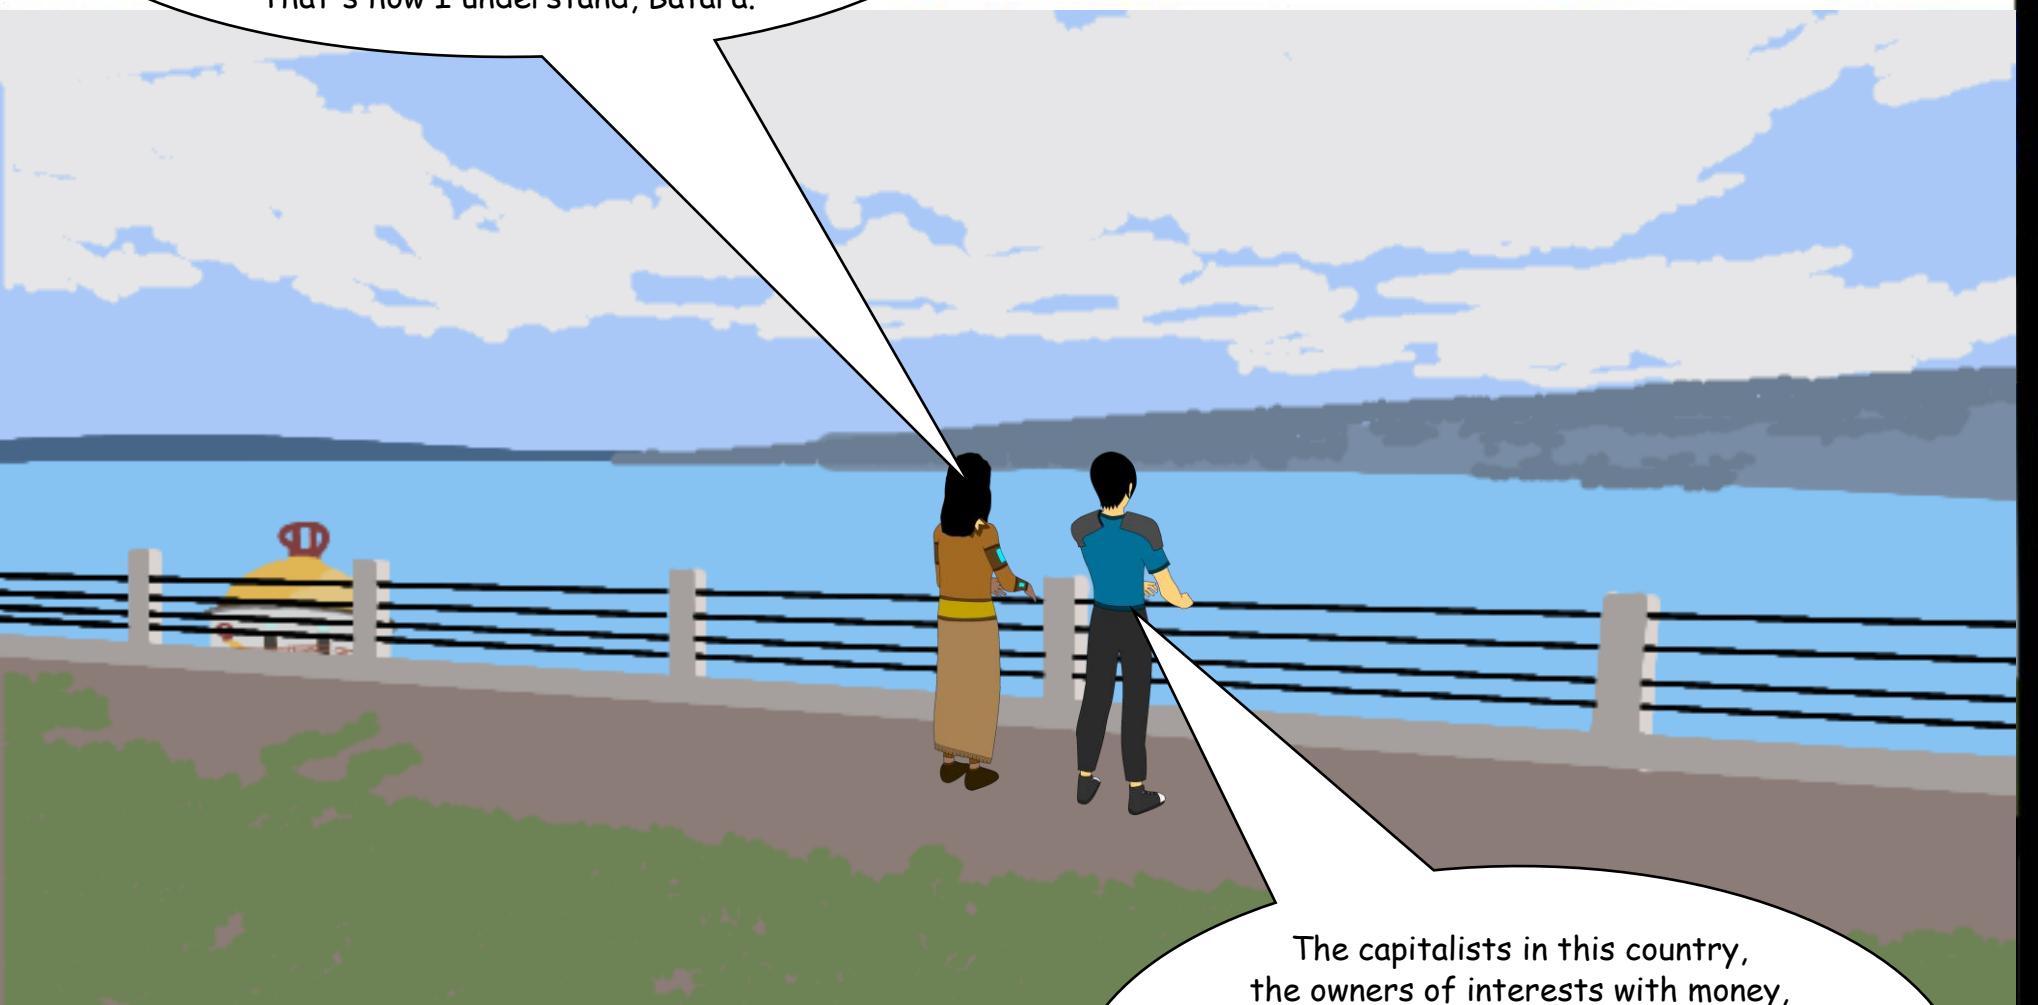

In Pangururan, it's already the industrial era 4.0 to welcome 5.0, right, Batara?

The belief in an authentic and completely free self is refuted by showing that the algorithms that make up human beings are not free.

They are shaped by genes and environmental pressures and decide either deterministically or randomly. All human activities and thoughts are specific due to genetic factors and result from an adjustment to various factors outside of themselves.

The human belief that I know myself best is countered by assertions that external algorithms can know me theoretically better than I can myself. The algorithms that scan every system that pervades my body and brain can identify exactly who I am and what I feel and want.

Batara, I thought.

This is the new age of technological idols for the modern world. Man sees himself as excellent. Everything is self-centered. People forget god and forget themselves.

That's how I understand, Batara.

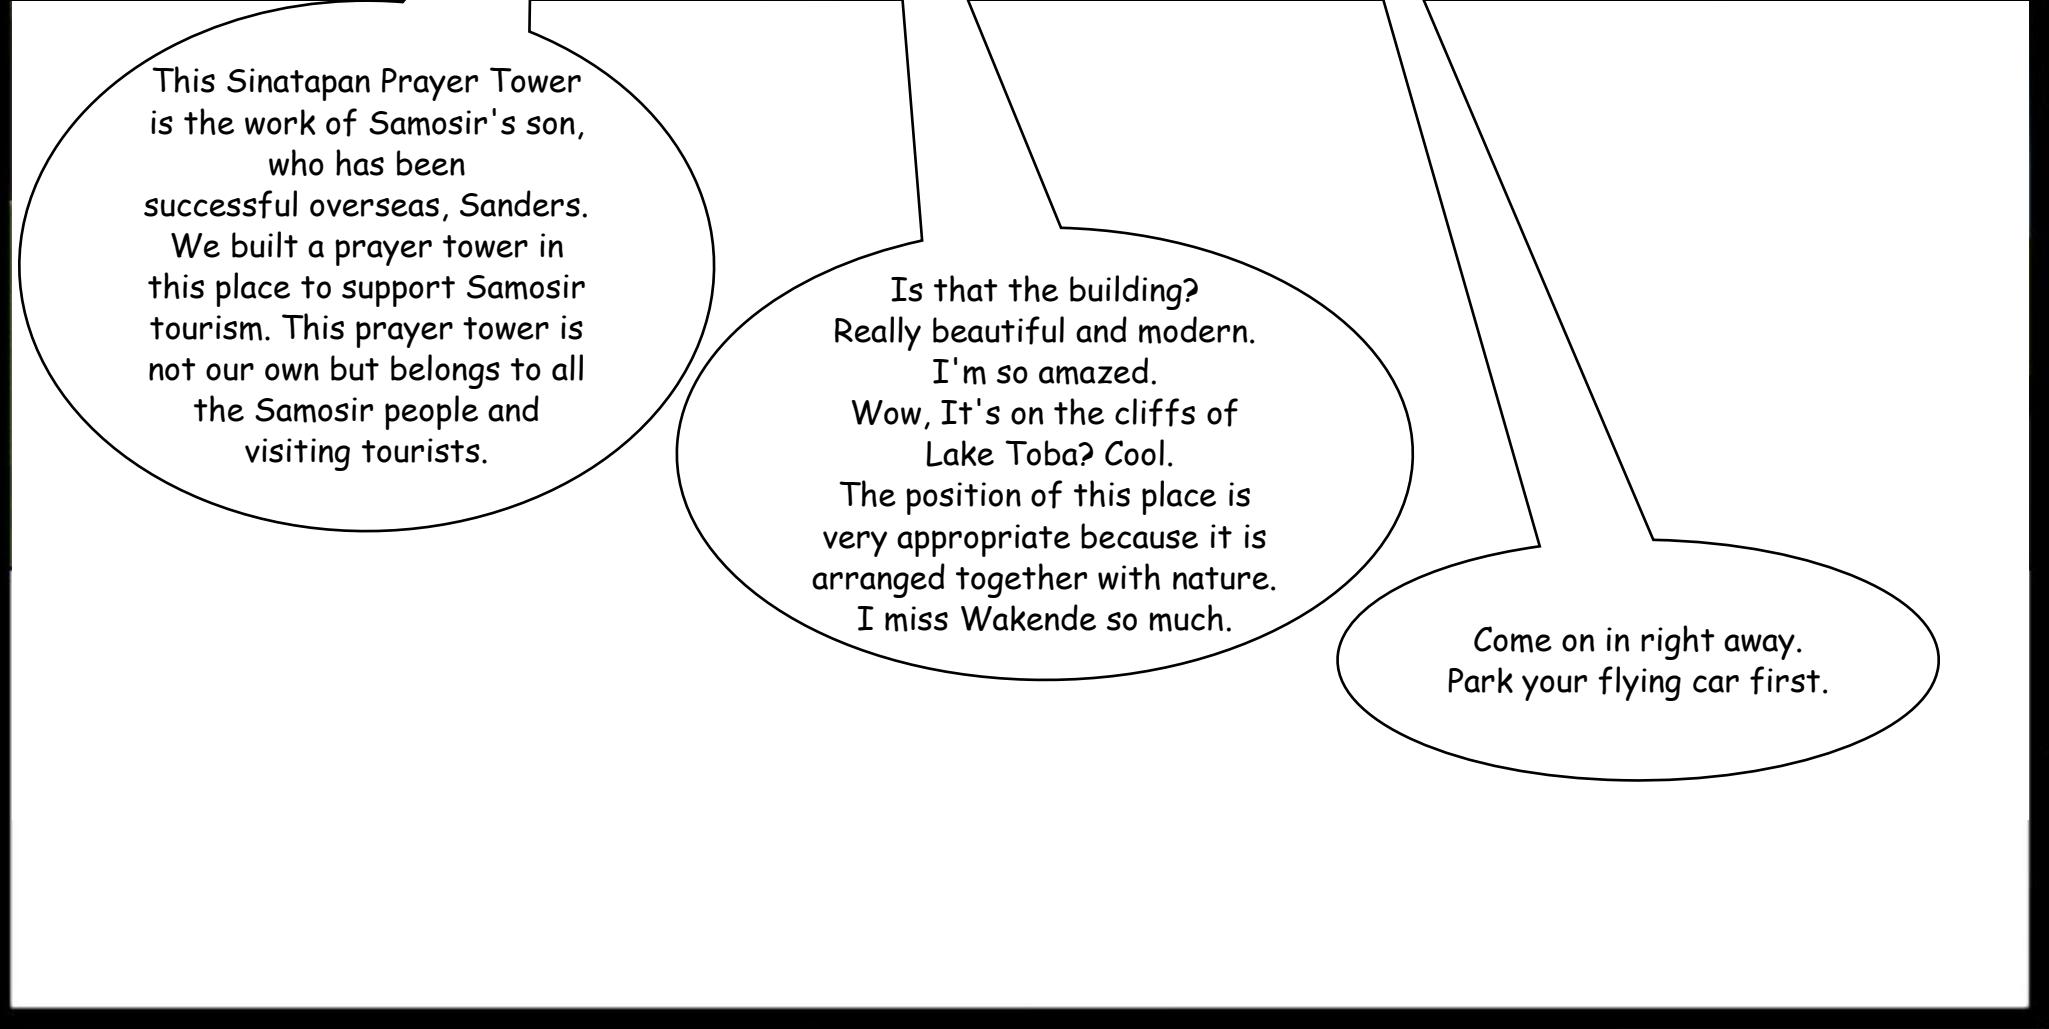

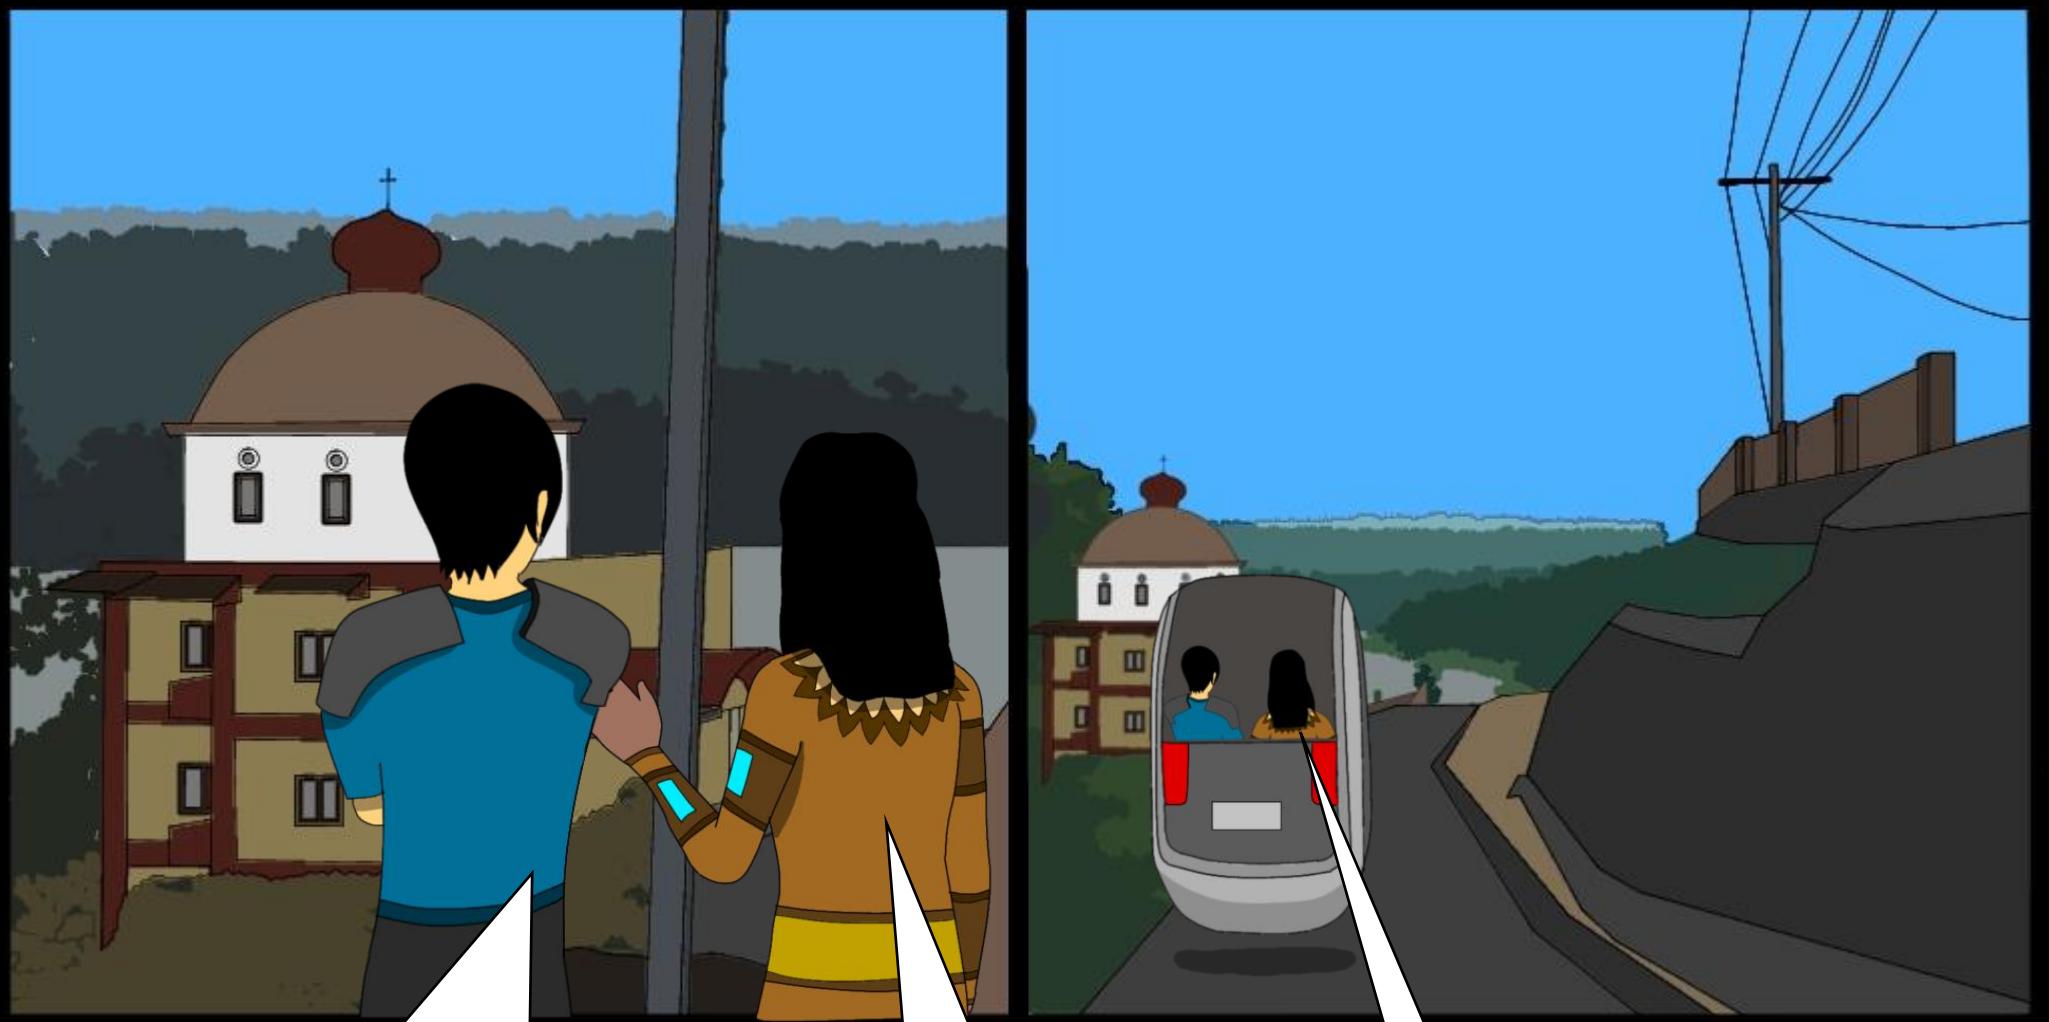

The capitalists in this country, the owners of interests with money, capital, and material wealth are used for profit. The impacted people needed more time to face the industrial revolution 4.0, such as not having advanced technology, even unfamiliar and foreign to this technology.

See Sandres. From up here, you can see Lake Toba. Hopefully, this beautiful Lake Toba can relieve your stress.

Haha ok.  
Let's go inside.

We're here, Sandres. See, even this place is open to anyone who wants to pray. You have to pray well to be granted.

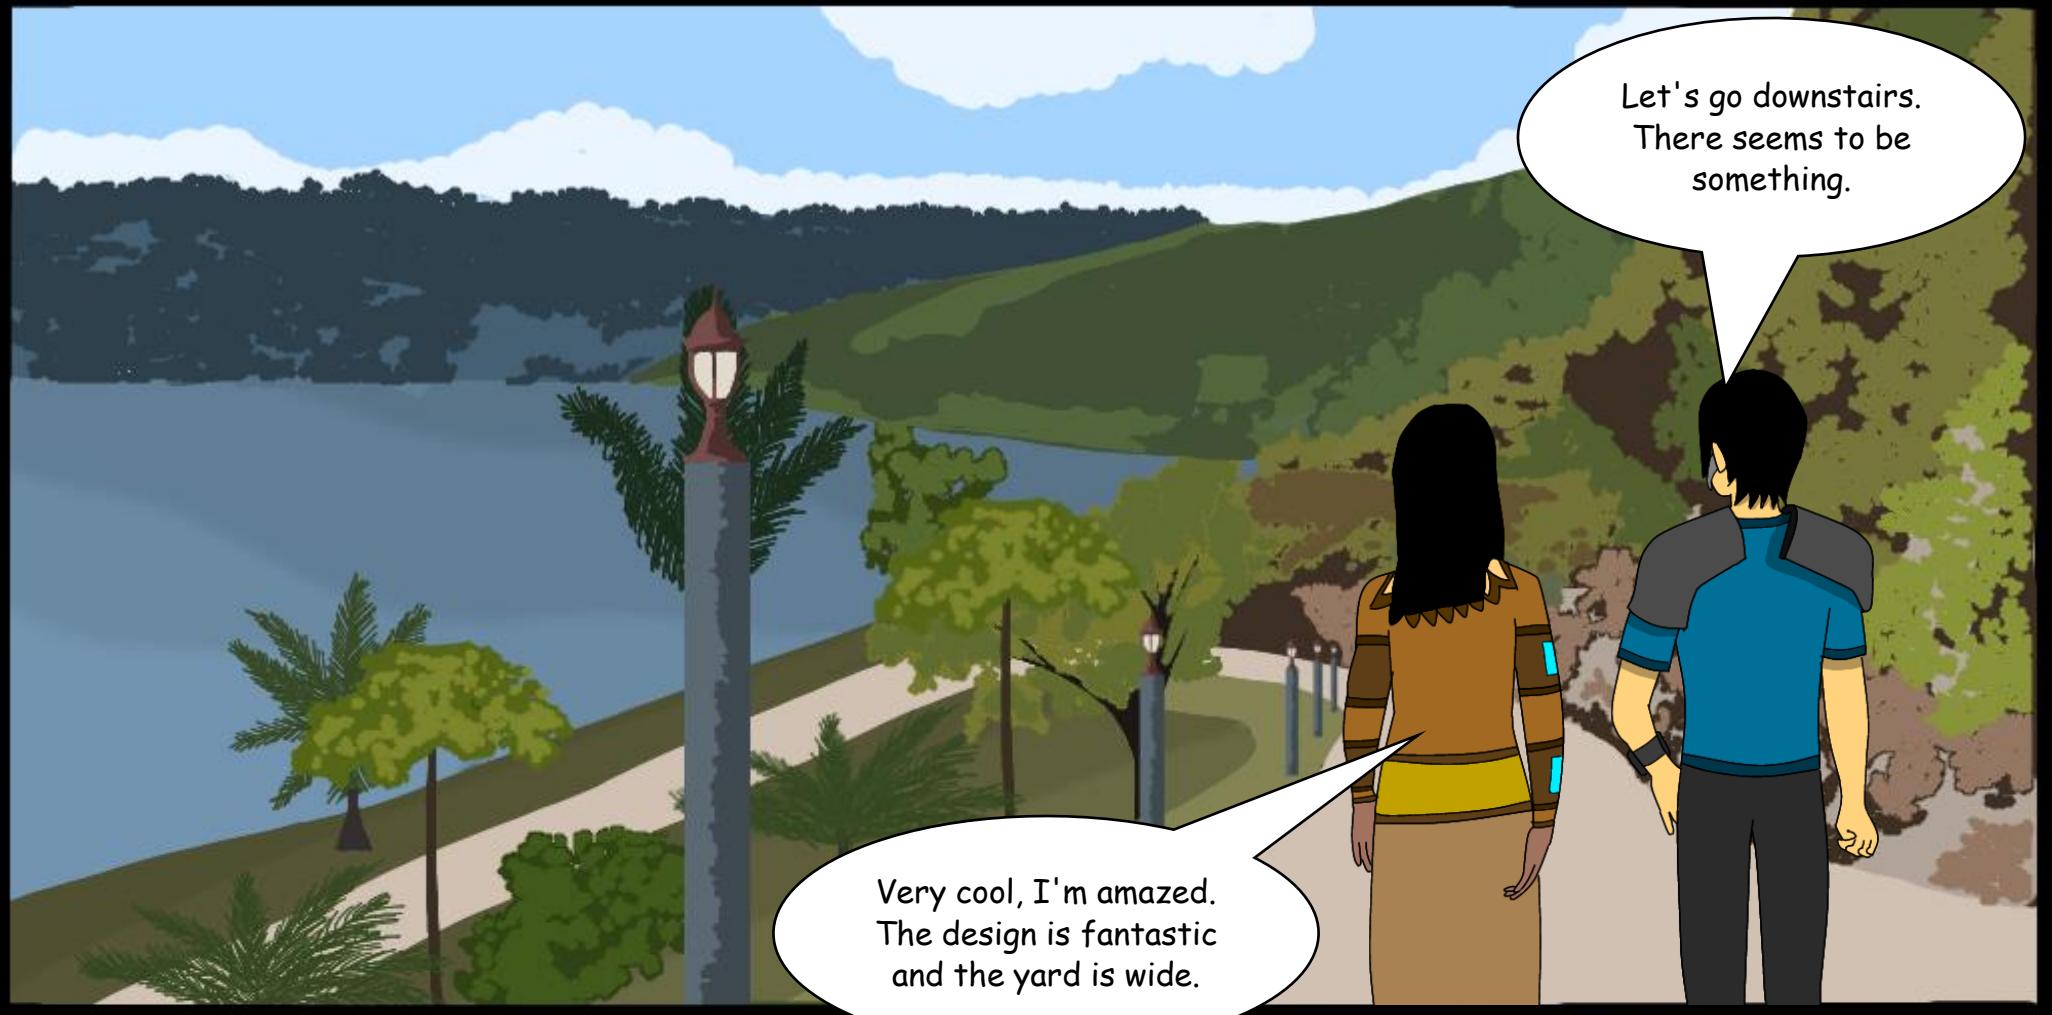

Correct. Don't I look small from here? Hahaha.  
How about we explore the outside first?

You can see the beauty of Lake Toba from here and the prayer tower too. God's creations are beautiful, and human designs are cool.

Let's go downstairs.  
There seems to be  
something.

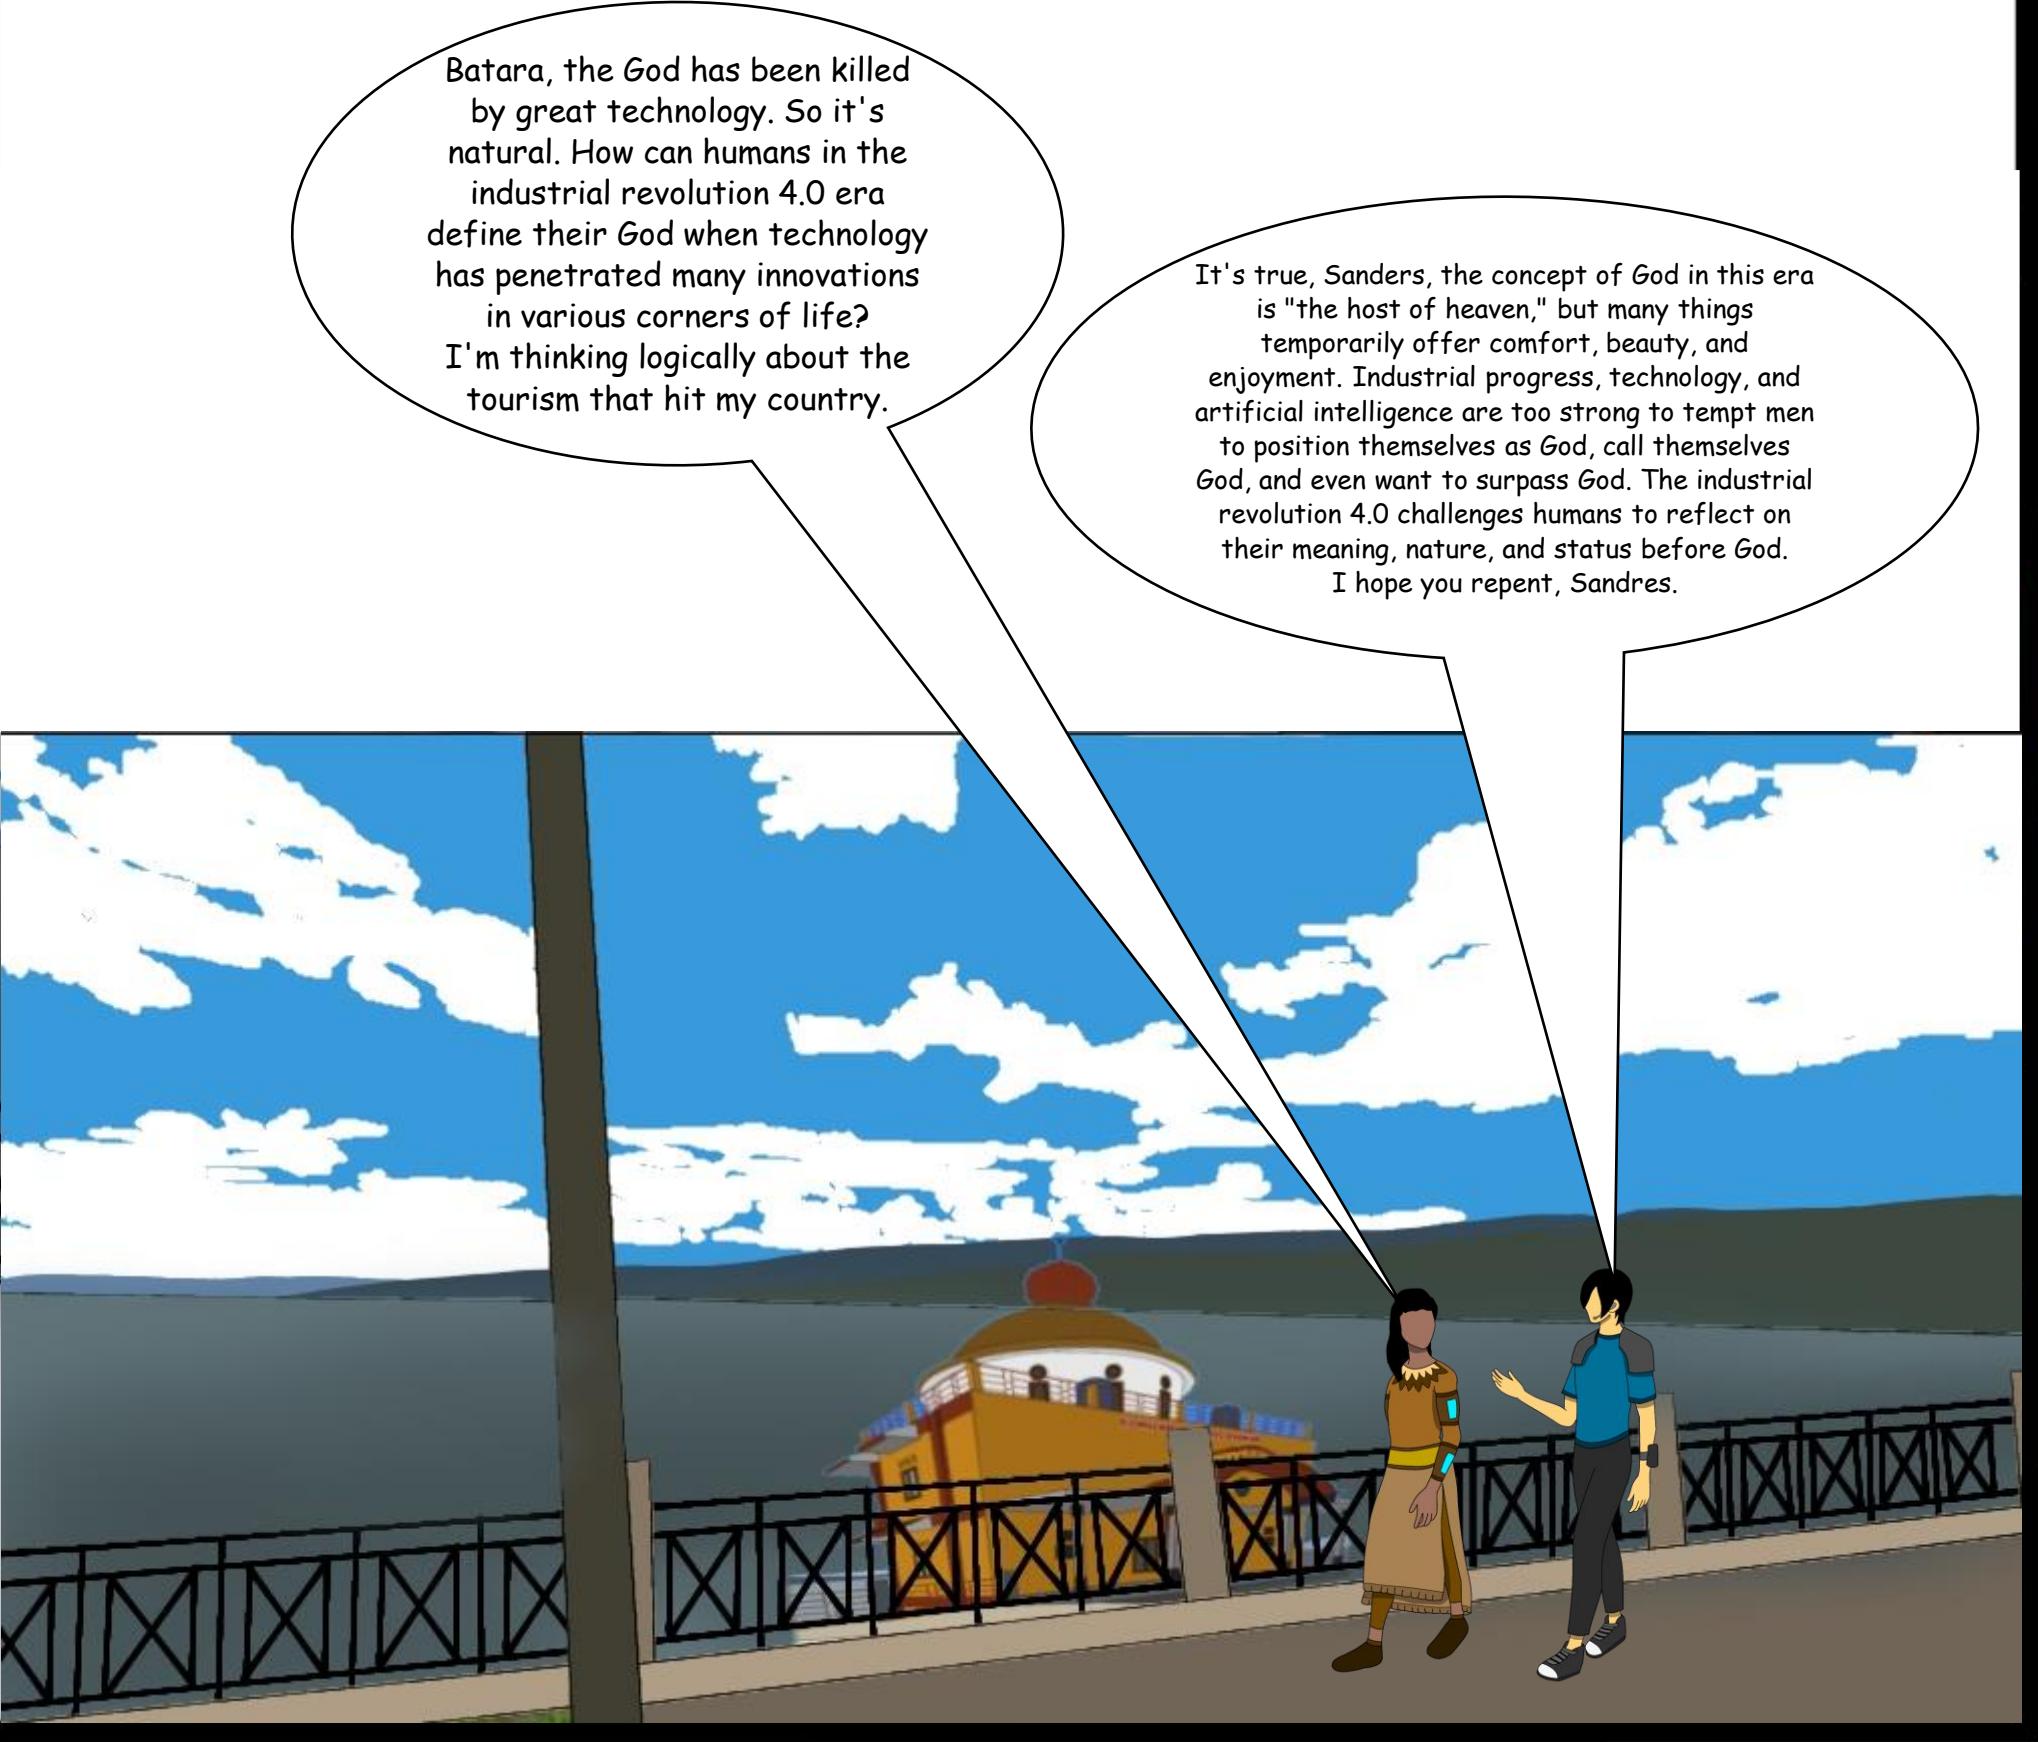

Very cool, I'm amazed.  
The design is fantastic  
and the yard is wide.

Sandres, you must stay  
strong in facing the  
problems of your country.  
Your brother must be  
proud of you.

I hope so. I must quickly  
find my country's cuprunium.  
I have to guess which sea  
Hans is in. because America  
is a nomadic country.

Batara, the God has been killed by great technology. So it's natural. How can humans in the industrial revolution 4.0 era define their God when technology has penetrated many innovations in various corners of life? I'm thinking logically about the tourism that hit my country.

It's true, Sanders, the concept of God in this era is "the host of heaven," but many things temporarily offer comfort, beauty, and enjoyment. Industrial progress, technology, and artificial intelligence are too strong to tempt men to position themselves as God, call themselves God, and even want to surpass God. The industrial revolution 4.0 challenges humans to reflect on their meaning, nature, and status before God. I hope you repent, Sandres.

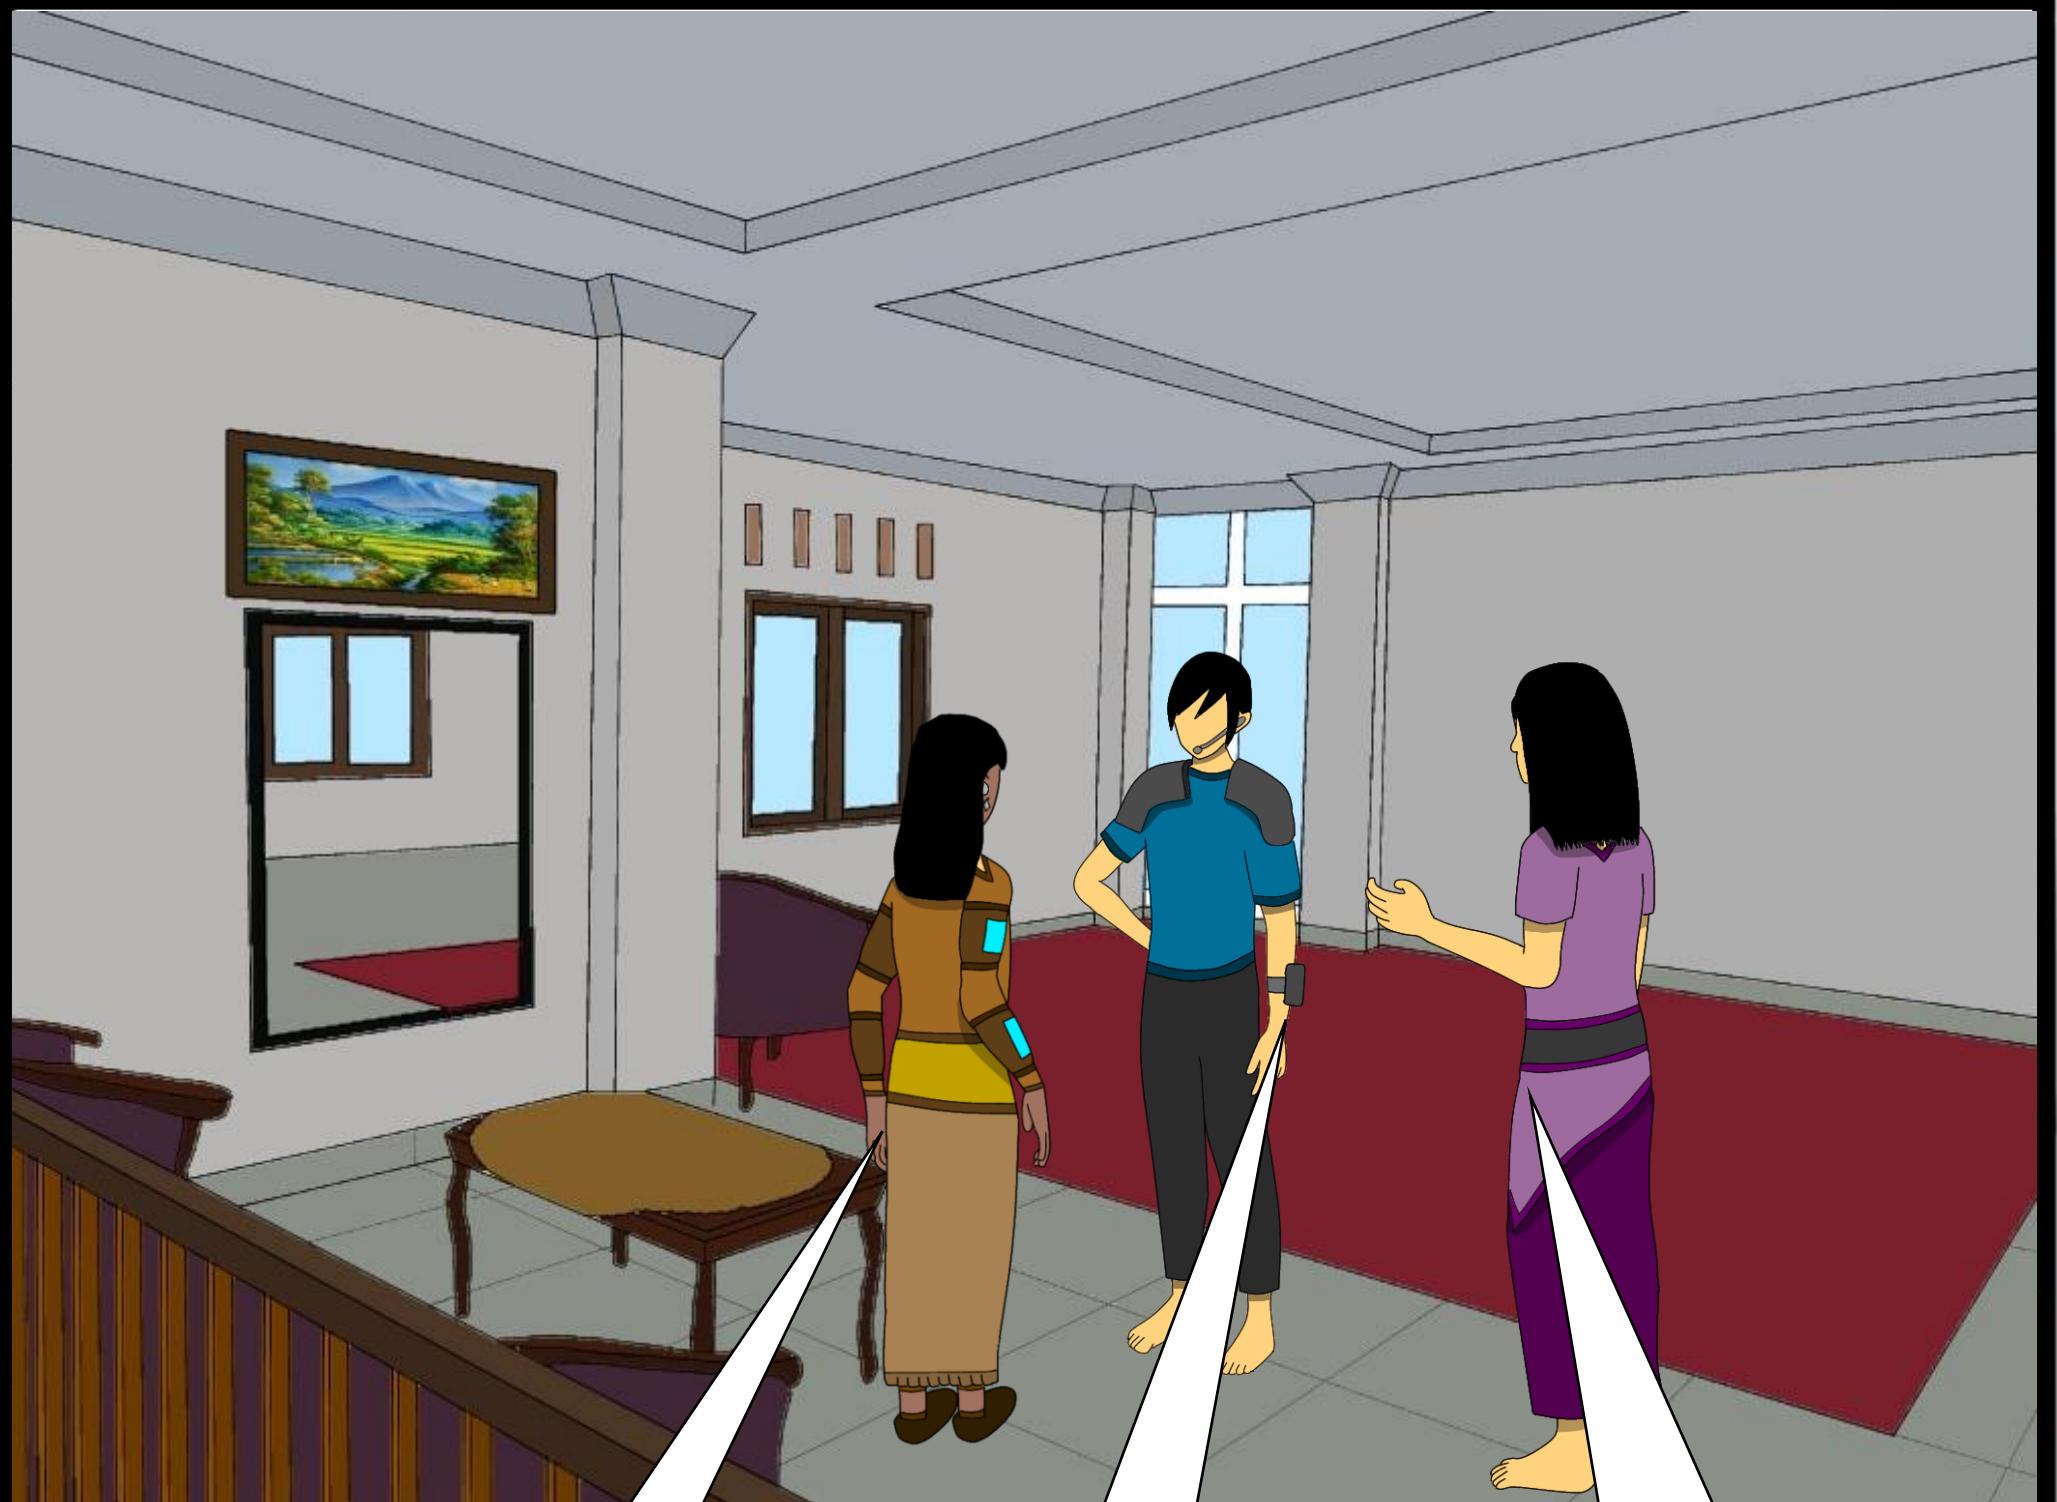

Batara, is that you?  
Come here, Son.  
Who did you bring that?  
Are you here to pray?

Sorry to disturb Mrs. Hasian.  
I am Sandres from a  
parallel country, Wakende.  
Am I allowed to pray here?

Sandres, meet Mrs. Hasian.  
She is my relative in charge  
of guarding and responsible  
for the prayer tower.

Of course, Sandres.  
Does God forbid a  
servant to pray?  
Come on in and I'll show  
you around. It looks like  
you have a pretty  
severe problem.

The room is big enough  
to accommodate many  
people, Mrs. Hasian.

I used to practice a lot  
for the accompaniment  
here, Sandres.  
Now I'm retired, hahaha.

This is an event room.  
Usually used to gather  
or practice for  
significant events.

Let's go upstairs.  
You must be tired of  
traveling long  
distances with a mind  
full of confusion.

Thank you, Mrs. Hesian.  
You are very kind.

This is the dining room.  
Room to accommodate  
guests, persons in charge,  
or priests to eat.

There must be a lot of  
people who come here.  
This reminds me of when I  
was boarding in Wakende.

Let's eat here,  
directly facing  
Lake Toba.  
To put your mind at ease,  
Sandres.

Lake Toba is one of God's extraordinary creations.

Thanks to Lake Toba, humans can get many lessons, such as understanding life and the formation of Lake Toba, namely natural knowledge, and people in 8 other districts can experience precious adventure scenes.

It's so beautiful.  
My mind becomes calm like the waves in a peaceful and serene lake.

By the way, I hope the food I serve is delicious. There is something more interesting up here. Let's go up.

Let's go up again, children.

I'm very comfortable being here.

Sandres, the industrial revolution 4.0 is not only changing what we make but also changing human understanding of their nature as individuals, social beings, and creatures that have creativity. Therefore, you must believe in God. We must not be anti-technology but use that technology to glorify God.

This place made me realize that the era of the industrial revolution 4.0 made me idolize technology, where I was only dealing with interests and self-satisfaction without prioritizing the principles that God wants me to strengthen for everyone.

Technological prowess in Wakende's country has replaced my mind and society's minds with algorithms and individualistic principles. With humility, I believe in God, who created this natural Lake Toba and me.

Sanders needs a light that can lead him to walk in the dark.

Kneel and pray, Sandres. God will help you if you ask sincerely.

Okay, Mrs. Hasian.

Sandres began to pray and a light appeared.

God, I apologize for all my mistakes and unpreparedness to become head of state. I need clarification about this issue. I hope to find a Hans soon to regain our cuprunium rights.

Mrs. Hasian, what is the meaning of the circled window with the symbol?

Beautiful prayer, Sandres. May God grant it.

God, in this beautiful place, I beg for all your help. We are helpless without your help, God. Then God, as a human being in this industrial revolution 4.0 era, I need the light of faith to guide me to walk in this new era. Knowledge of God is crucial for me to have confidence in you.

This is a symbol of the 12 tribes of Israel. Namely  
Naftali, Levi, Joseph,  
Zebulun, Asher, Simeon,  
Reuben, Judah, Dan,  
Benjamin, Gad, and Issachar.

This is the very top,  
Mrs. Hasian?  
Why does the shape  
of the roof use a  
round dome?

Yes. This is the very  
top of the prayer tower.  
The dome of this prayer tower  
is round in shape,  
which symbolizes unbroken  
togetherness and brotherhood,  
but still does not forget the  
symbol of the cross as a symbol  
of religion.

The beautiful  
meaning behind  
the simplicity of  
the building.

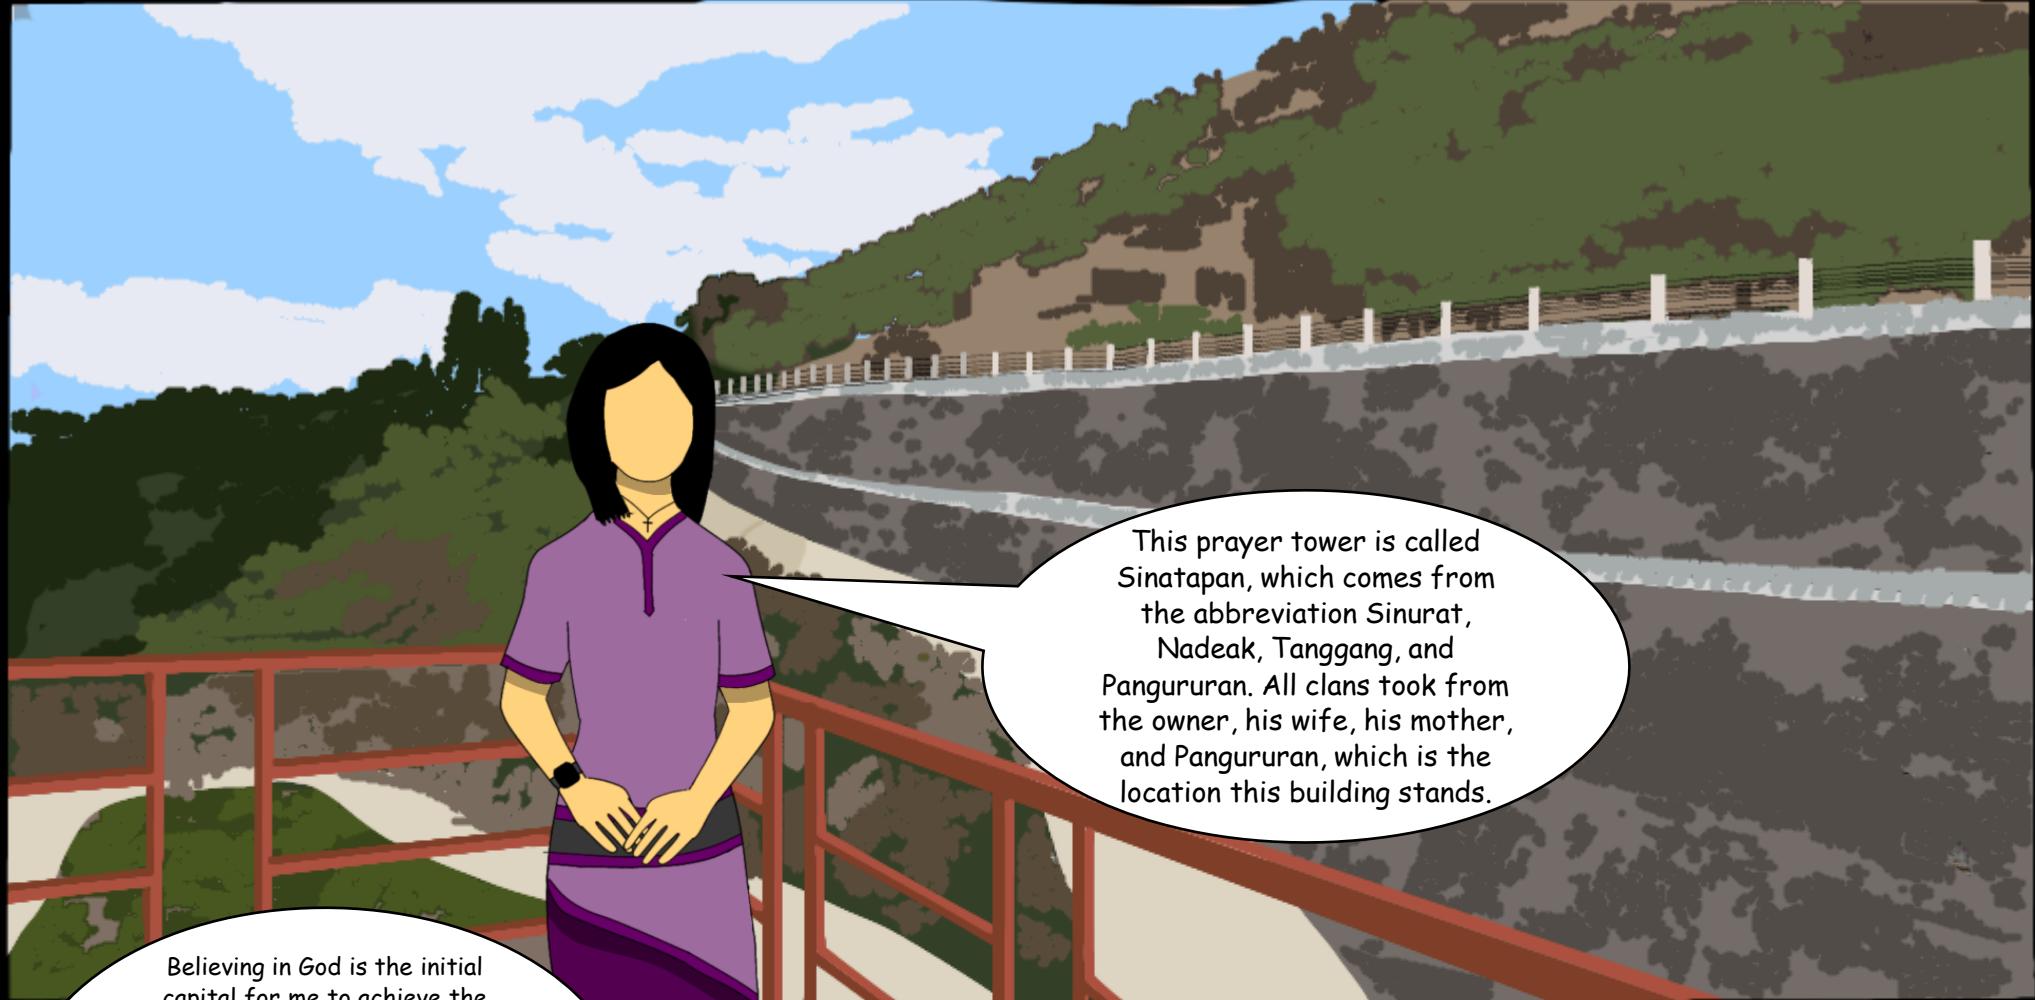

You have to remember that we, as humans, really need other humans. We always need help to do this. Be a human being who likes to help and always remember God. Don't forget that God always sends us to take care of God's creation, especially nature, so everything is perfectly preserved.

That's right, Mrs. Hasian. Even though the haze threatens human life, we must remember that life on Lake Toba, without technology, is meaningless death.

It's true, Mrs. We must protect nature, not destroy it. We must also use technology to preserve the essence of Lake Toba.

Oh my God, Batara?!  
You are a good and  
intelligent friend!  
You look quiet but help  
me find the way.

Didn't I already say I will  
always help you?  
Quickly take the cuprumium  
before America moves again.  
You know, Sandres, I am indeed  
a Batak person, which is one of  
the largest tribes in Indonesia.  
Many successful Batak people  
are also in foreign countries.

Mrs. Hasian, I am genuinely  
Thanks for the knowledge  
and the welcome.

I will promise to come back and  
intend to build a tower with a  
similar prayer in Wakende!  
Mrs. Hasian, Wakende always!

Hahaha.  
Mrs. Hasian, we say  
goodbye first.  
I will help Sandres first.  
Mauliatte!

Sandres, technology in the era of  
the industrial revolution 4.0  
welcoming society 5.0,  
makes humans actualize their  
thoughts through algorithms.  
You have to believe in God.  
Take care, great children!  
God must always be with you.

Sandres then jumped into the lake after turning into a Black Cendrawasih !  
Goodluck Sandres !

Hello, Wakende Squad.  
Quick teleport to the  
Pangururan, Samosir island.  
The point in Lake Toba.  
Cuprunium was discovered.  
Wakende always!!

Wait for me, Sandres.  
I forgot to bring  
swimming clothes...

The nature of Lake Toba is the best teacher because every adventure scene will teach us valuable knowledge about The power of God. If you have habitually communed with God when the sun is shining, you will find it easier to sing in the rain.
